01. Explain the following terms in your own words.

a. Traditional Software Development

b. DevOps

c. DevSecOps

02. Describe the major security challenges associated with traditional software development approaches.

03. Compare DevOps and DevSecOps. Explain at least five key differences between the two approaches.

04. Security is considered a shared responsibility in DevSecOps.

05. Discuss the role of each of the following stakeholders in ensuring software security:

- Developers
- Security Engineers
- Operations Engineers
- Testers
- Project Managers

06. Discuss the goals of DevSecOps. How do these goals help organizations deliver secure and reliable software?

07. Explain how security activities are integrated into each phase of the Software Development Life Cycle (SDLC).

08. Automation is a fundamental principle of DevSecOps.

09. Explain why automation is important and provide examples of security activities that can be automated during software development

10. "Delivering software faster is meaningless if the software is insecure."
