Sri Lanka Institute of Information Technology

Penetration Testing (IE3132)

Tutorial 03

Year 3 Semester 2

Network Discovery and Port Scanning Tutorial

1. What are the three primary types of scanning used in pentesting, and what are their respective objectives?

2. Compare the key features of TCP and UDP communication as they relate to network scanning.

3. Outline the steps of the TCP 3-way handshake and the specific flags used in each step.

4. Name five different tools mentioned in the lecture that can be utilized for network scanning and discovery.

5. What is the difference between "Active Fingerprinting" and "Passive Fingerprinting" for OS identification?

6. Explain the technical differences between a "NULL scan" and an "Xmas tree scan."

7. Identify three Nmap command-line switches and describe what they enable during a scan.
